Find out how Arity PreQual has been used to lower insurance premiums by 20%

Leverage unmatched data to screen drivers for better returns - before anyone drives on your platform.

**BENEFITS**
- Reduce the potential of collisions when drivers apply
- Use risk predictions to screen drivers
- Set risk-based pricing strategies
- Work with insurers to adjust pricing at quote

**THE ARITY DIFFERENCE**
Our models are built on 85+ years of historical claims data with associated driver data. As loss modeling experts, we know which types of drivers result in different incidents. Take advantage of our driver risk insights - such as cost and accident likelihood - before anyone even drives a mile on your platform.

Fleet Utilization

Protect your cars, drivers, and business with insights beyond tracking

Insights on how each driver, vehicle, trip, and incident relates to potential claims

**Benefits**
- Respond faster with real-time collision detection
- Identify how each driver affects your vehicles
- Avoid paying for vehicle damages that happened off your platform
- Facilitate claims handling by providing data on activity before and after an impact

**The Arity Difference**
Arity is the only data and analytics company combining 85+ years of claims with associated driving data. By adding over 10+ years of experience collecting data from connected cars, our insights focus on how vehicle activity and driving behavior affect accidents, damages, and your bottom line.

Learn what’s happening on and off your platform

Analyze how driving behavior and incidents vary in each driving period

**BENEFITS**

- Increase driver retention
- Report incidents by period
- Facilitate claims reconciliation
- Optimize commercial coverage

**THE ARITY DIFFERENCE**

Arity is the only data and analytics company combining 85+ years of claims with associated driving data. With analytics on incidents and driving risk by period, understand the implications of how a driver’s activity on and off your platform affect insurance premiums and claims costs.

Clutch has helped car subscription providers achieve up to **20 percent reduction in premiums** since incorporating Arity PreQual into their risk management technology.

Aarity and Clutch Technologies partnered to change the way insurers evaluate the risk of vehicle subscription drivers, helping companies accurately assess risk and lower commercial insurance pricing.

**THE CHALLENGE**

As commercial drivers carry more risk given the nature of their trips, subscription providers like Clutch’s customers can end up with prohibitively high insurance costs.

**OUR APPROACH**

Clutch and Arity agreed to work together to use Arity PreQual to predict and manage individual driving risk before a potential driver hits the road.

**THE RESULT**

“We see these findings as a first step and catalyst to connect more mobility providers with insurance carriers and be confident that their drivers will be safe and good custodians of vehicles.”

—Grady Irey, Senior VP, Arity Data Science
